Allowable Subject Matter

16. Applicant’s arguments, see pages 8-11, 13, and 14, filed 6/6/2005, with respect to claims 13, 14, 16, and 26 have been fully considered and are persuasive. The rejection of claims of 13, 14, 16, and 26 has been withdrawn.

17. Claims 13, 14, 16, and 26 are allowed.

The following is an examiner’s statement of reasons for allowance:

18. With regard to independent claim 13, the prior art of record fails to disclose an apparatus as claimed, and enabled by the specification, comprising a host computer for *converting an execution file into an updated firmware*, a personal computer coupled to the host computer, a firmware board with an interface for communicating with the personal computer, and a first and second memory means on the firmware board, wherein: the personal computer downloads an updated firmware from the host computer and transmits it to the firmware board, where it is analyzed by a production

processing program and *based on the analysis*, the production processing program operates in either the first or second memory means to store the updated firmware in the first memory means, and wherein the *host computer* is operable for attaching a *storage address information of said first memory means* to the updated firmware.

19. With regard to independent claim 14, the prior art of record fails to disclose a method as claimed, and as enabled by the specification, comprising: providing a flash memory in a firmware board for storing a production processing program; creating, *at a host computer*, a file for production *by converting an execution file prepared in advance into a file for production*; receiving the *file for production* at a personal computer and storing it in the flash memory, wherein the production processing program is duplicated in an externally connected RAM while upgrading the production processing program, and wherein the *file for production* includes a header containing a *storage address of the flash memory, a compression state, and a booting state* for the file for production.

20. With regard to independent claim 26, the prior art of record fails to disclose an apparatus as claimed, and as enabled by the specification, comprising: comprising a host computer for *converting an execution file into a file for production*, a personal computer coupled to the host computer, a firmware board with a flash memory, a DRAM for storing a copy of a production processing program when upgrading the program so that the upgrade can be performed in the DRAM, and wherein the PC stores the *file for production* in the flash memory using the production processing program in the flash

memory, and wherein the *host computer* attaches a *storage address of the flash memory, a compression state, and a booting state* for the file for production during creation of the file.

21. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
